# Deformation carapace tortue terrestre

1. Be the first to answer! This question is blocked. Although it has been said several times that European turtles do not specifically eat meat or caroon in nature, they feed exclusively from vegetable food. This question still does not contain reply. This is not always pathological. After my observations and my experience, the environment and the contiguous pure moisture have no important reasons on the development of the model until the animal is hydrated by drinking or bathing. Basically, turtles live in habitat where a strong Higrone is there. Think of replacing your UVB lamp once a year, which must be good quality, it's not worth making false economies. If you need more information, don't rent. Thus, again, the dossi, even if they are also occurring in wild turtles, are regularly in European turtles an indication that their water equilibrium is debts. The raised humidity is always present in their habitats and infinitely important for their respiratory system. These arguments were able to balance their internal water balance. In the case of young turtles (even for adults), a humid substrate and a high eagnea is always vital. Dalmate Specimen in Croatia Wolfgang Weghaup is the author of this text in German whose friendly authorization to translate it, you can find the original of this article on the website of him in which him son of him Manuel is the columnist. Great passion turtle for over 50 years, Wolfgang Weghaup is the author of many books published in English, you can discover them at this address. The session is aggravated in recent years due to the lack of So every summer, hundreds of spices die of demonstration. I found extremely derived turtles in a very arid and dry habitat in Sardinia. It comes from an area near the sea and therefore very wet. The largest of their diet must have a soccer / phosphorus ratio greater than 2, compensating for those who have nothing else for which this relationship is even more updated. The perfectly smooth tortoise shells without deserving can still be covered in places ignored by civilization and stored by urban planning. 2. Posted on January 5, 2018 Arned Tertortui of BuyAq> à, , Ads TortueEnclos Tortobassin Tortouma Tortouin TortreinCubbation Turtle Turtle Egg Tortuescaedau TurtleÀ \* ÀÇÀ À \* À \* ÀÇÀ \* ÀÇÀ Daleyelevage TortueAnimalerie Tortroeaassociation TortueForming Tortrogement Tortueparc Animal Tortoautres Hi. I have Three turtles of Hermann 1 year. So, a young Hermann who presents a lightened carapace that is not rare and without climbing if it is not too pronounced. I regularly find regulated animals in localized populations near many aquatic points. Newspeceshamsterlapinsourisratfuretcochon of indechinchillactoddingbillesassurance of sugaCorria À · Published October 15, 2016 À · Updated October 21, 2020 Many turtles are in captivity, presented with pyramidal bone plates. Develop at levels. It is a fantasy M Antenoid from all the owners of this animal. It is also of nature, the samples can be found with imperfect dotsides in each population. A strong The day / night temperature is also essential for the health of European turtles. European turtles are pure herbivores and should not be fed with food food. The real problem is not the "primary" toperoning, but the care associated with humans who do not correspond to the needs of turtles. The causes of the formation of these protrusions have not yet been accurately explained by the scientific community. Privileges plants as indicated in the "food" article "Turtles MÀ © derraneranes" and in the described proportions. The appearance of the dossi occurs only when the turtles of medicine are not detained and naturally fed. Include here À € "Cause of the toperonage we will specify that the origin of this workout is due to a too dry substrate. The specimens of dosstone growth are mainly in the arid areas without water from the proximity with a correct level of moisture. I am worried For the biggest, I saw that turtles could have dealorkers of carapace following concerns about nutrition. The presence of a cup of water does not necessarily mean that the animal absorbs enough fluid. This is especially true for Cultivate turtles. He quickly explained my theories on this phenomenon. I am under the UV lamp and go to the edge of the window in the sun when it is beautiful. However, thanks to my many years of observation in nature, I came to the conclusion that the simple one Shape of Tambler is not bound exclusively for too weak environmental humidity, but rather on the water budget of the turtle. Thank you very much And above all thank you for them. However, these properties are regularly decorated And their growth breaks. Here for now, confident of having helped you. Hi Alexia, first of all, we would need some recent photos to be able to judge the situation. Everything at the beginning, it is a mistake to believe that all specimens must develop the same way. Pepting Water in Sardinia for this Hermann Hermann I know the highs that maintain their turtles in a dry substrate and a wet atmosphere and still have smooth shells. In nature and in captivity, this unique cause of too low ambient moisture does not affect the turtle health. See you soon, Fabrice. In terms of granular foods, limit them to the periods in which it is more difficult to find all the necessary plants, especially because these foods are often too rich in proteins à €
